ANDROID PROGRAMMING PRACTICAL 01

Module 2 · AppBar Toolbar and Options Menu

Aim

Implement an AppBar (Toolbar) and Options Menu.

Project name: ToolbarMenuDemo

Requirements

Android Studio, Java, Android SDK, and an Android Virtual Device or compatible Android phone. Use the package name generated by your project and adjust imports/dependencies to the installed Android Studio template.

Procedure

1. Create an Empty Views Activity project with AppCompat support and add an androidx.appcompat.widget.Toolbar to activity_main.xml.

2. Create res/menu/menu_main.xml with menu items such as Home, Settings, About, and Logout.

3. In MainActivity, find the Toolbar and call setSupportActionBar(toolbar).

4. Override onCreateOptionsMenu(Menu menu), inflate R.menu.menu_main, and return true.

5. Override onOptionsItemSelected(MenuItem item), check item IDs, and perform an action such as displaying a Toast.

6. Run the app and open the toolbar overflow menu.

7. Tap every menu item and verify the corresponding action occurs.

Implementation checklist

• Keep resource names lowercase and use unique view IDs.

• Make sure every referenced layout, menu, drawable, string, or Java class exists in the project.

• Build the project and resolve compile errors before running it.

• Use Logcat to diagnose runtime errors and permissions or manifest issues.

Expected result

Toolbar menu items appear and each selection triggers the intended action.

Testing / observations

Record the device/API level, the actions tested, the observed output, and any errors corrected. Attach a screenshot of the successful run to your practical record if required by your institution.

Conclusion

The stated Android concept was implemented and verified through the steps and tests above.
