ANDROID PROGRAMMING PRACTICAL 03

Module 2 · Contextual and Popup Menus

Aim

Implement contextual menus and popup menus.

Project name: MenuDemo

Requirements

Android Studio, Java, Android SDK, and an Android Virtual Device or compatible Android phone. Use the package name generated by your project and adjust imports/dependencies to the installed Android Studio template.

Procedure

1. Create a TextView that users can long-press and a Button to show a popup menu.

2. Create res/menu/menu_options.xml with Edit, Delete, and Share items.

3. Register the TextView with registerForContextMenu().

4. Override onCreateContextMenu() and inflate the menu resource.

5. Override onContextItemSelected() to handle the chosen contextual action.

6. For the popup button, create PopupMenu anchored to the button, inflate the same menu, and set an item-click listener.

7. Run the app, long-press the TextView, then open the popup menu and test each item.

Implementation checklist

• Keep resource names lowercase and use unique view IDs.

• Make sure every referenced layout, menu, drawable, string, or Java class exists in the project.

• Build the project and resolve compile errors before running it.

• Use Logcat to diagnose runtime errors and permissions or manifest issues.

Expected result

Long-press contextual menus and anchored popup menus display and respond to selections.

Testing / observations

Record the device/API level, the actions tested, the observed output, and any errors corrected. Attach a screenshot of the successful run to your practical record if required by your institution.

Conclusion

The stated Android concept was implemented and verified through the steps and tests above.
