ANDROID PROGRAMMING PRACTICAL 04

Module 2 · Explicit and Implicit Intents

Aim

Implement Explicit and Implicit Intents.

Project name: IntentDemo

Requirements

Android Studio, Java, Android SDK, and an Android Virtual Device or compatible Android phone. Use the package name generated by your project and adjust imports/dependencies to the installed Android Studio template.

Procedure

1. Create MainActivity with two buttons: Explicit Intent and Implicit Intent.

2. Create SecondActivity and its layout; register the Activity in AndroidManifest.xml if not auto-registered.

3. For the explicit button, create Intent(MainActivity.this, SecondActivity.class) and call startActivity().

4. For the implicit button, create an ACTION_VIEW Intent with a valid https URI.

5. Before launching external actions, handle the possibility that no compatible activity exists if appropriate.

6. Run the app and verify the explicit intent opens SecondActivity and the implicit intent opens a browser or app chooser.

7. Return to the first screen and test both buttons again.

Implementation checklist

• Keep resource names lowercase and use unique view IDs.

• Make sure every referenced layout, menu, drawable, string, or Java class exists in the project.

• Build the project and resolve compile errors before running it.

• Use Logcat to diagnose runtime errors and permissions or manifest issues.

Expected result

The explicit intent opens the second activity and the implicit intent launches a compatible app.

Testing / observations

Record the device/API level, the actions tested, the observed output, and any errors corrected. Attach a screenshot of the successful run to your practical record if required by your institution.

Conclusion

The stated Android concept was implemented and verified through the steps and tests above.
