ANDROID PROGRAMMING PRACTICAL 05

Module 2 · Event handling with listeners

Aim

Demonstrate event handling using OnClickListener and OnLongClickListener.

Project name: EventHandlingDemo

Requirements

Android Studio, Java, Android SDK, and an Android Virtual Device or compatible Android phone. Use the package name generated by your project and adjust imports/dependencies to the installed Android Studio template.

Procedure

1. Create two buttons labelled Click Me and Long Press Me.

2. Find both buttons in MainActivity after setContentView().

3. Register setOnClickListener() on the first button and show a short Toast when tapped.

4. Register setOnLongClickListener() on the second button and show a Toast when held.

5. Return true from the long-click callback when the long press is consumed.

6. Run the app and test tap and long-press interactions separately.

7. Verify that each listener produces the expected feedback.

Implementation checklist

• Keep resource names lowercase and use unique view IDs.

• Make sure every referenced layout, menu, drawable, string, or Java class exists in the project.

• Build the project and resolve compile errors before running it.

• Use Logcat to diagnose runtime errors and permissions or manifest issues.

Expected result

Tap and long-press gestures produce their corresponding feedback.

Testing / observations

Record the device/API level, the actions tested, the observed output, and any errors corrected. Attach a screenshot of the successful run to your practical record if required by your institution.

Conclusion

The stated Android concept was implemented and verified through the steps and tests above.
